Primary Science Facts – (Worksheet 22)

Circle the letter of the answer that correctly indicates whether the science fact shown is true or false.

1. The moon orbits the Earth once per day.  
   True or False:  
   a. True  
   b. False

2. The moon appears in the same location in the sky every night.  
   True or False:  
   a. True  
   b. False

3. Only half of the moon can be seen from Earth.  
   True or False:  
   a. True  
   b. False

4. There is ice on the Moon.  
   True or False:  
   a. True  
   b. False

5. The planet Mars once had flowing canals of water.  
   True or False:  
   a. True  
   b. False

6. Prehistoric humans killed off all the dinosaurs.  
   True or False:  
   a. True  
   b. False

7. Sunlight is composed of only one color of light.  
   True or False:  
   a. True  
   b. False

8. Some large atoms can be seen by the naked eye.  
   True or False:  
   a. True  
   b. False

9. Our noses can detect the presence of different molecules.  
   True or False:  
   a. True  
   b. False

10. Cold molecules move slower than warm or hot molecules.  
   True or False:  
   a. True  
   b. False
Key to Primary Science Facts – (Worksheet 22)

Circle the letter of the answer that correctly indicates whether the science fact shown is true or false.
